

RADEON™ 9100 IGP Memory Compatibility

The objective of the memory compatibility testing program is to ensure compliance of different memory modules with the RADEON™ 9100 IGP chipset. The modules are tested as to ATI specifications using industry standard testing methods. This testing is not intended to replace the normal OEM module qualification process.

The Memory Compatibility Process describes how modules can be submitted to ATI approved validation labs. Only modules which pass comprehensive testing by ATI's validation labs are listed here.

Please contact memory@ati.com should you have any questions.

RADEON™ 9100 IGP Compatible DDR333 (PC2700) 184 Pin Unbuffered DIMM memory Modules
